About this User Manual

This user manual contains information about all the features & functionalities of the Duplicate Photo Cleaner[™] application & instructions on how to use them.

Purpose of this User Manual

The purpose of this user manual is to assist the end users of the Duplicate Photo Cleaner[™] application.

In Scope of this User Manual

The scope of this user manual includes the description and usage of the Duplicate Photo Cleaner[™] application.

Out of Scope of this User Manual

The scope of this user manual does not include -

- ☑ the detailed installation process of Duplicate Photo Cleaner[™] application
- It the usage of the features and functionalities of your operating system

Intended Audience of this User Manual

The intended audiences of this user manual are -

WM - DPCUM - 2.0

☑ end users of the Duplicate Photo Cleaner[™] application

Organization of this User Manual

This user manual contains 11 chapters & 1 appendices as indicated below -

CHAPTER	DESCRIPTION	
Chapter 1	Introduction	
Chapter 2	Getting Started	
Chapter 3	Registering your DPC Application Installation	
Chapter 4	Activating your DPC Application Installation	
Chapter 5	Entering a New Key	
Chapter 6	Performing a Standard Scan	
Chapter 7	Performing a Folder Comparison	
Chapter 8	Performing a Photo Scan	
Chapter 9	Performing a Lightroom Classic Scan	
Chapter 10	Performing a Fragment Search	
Appendix A	Frequently Asked Questions

Typographical Conventions / Customaries used in this User Manual

The typographical conventions used in this user manual include the following -

- Note: The purpose of this typographical convention is to provide important information corresponding to an already stated fact. This is how we depict a note in this user manual –
 Note:<Note Text><Note Text
- ✓ **Tip:** The purpose of this typographical convention is to provide additional information supplementing an already stated fact. This is how we depict a tip in this user manual –

Tip:<Tip Text><Tip T

✓ Warning: The purpose of this typographical convention is to provide critical information corresponding to an already stated fact. This is how we depict a warning in this user manual –

Warning:<Warning Text><Warning Text>

Reference: The purpose of this typographical convention is to refer you to another section in this user manual or another document or to an external reference. A reference is depicted in the following manner in this user manual –

Reference: To read detailed steps, navigate to <<u>Chapter Name></u> chapter by clicking this link.

or

Reference: For more information, navigate to <<u>Chapter Name></u> chapter by clicking this link.

Abbreviations / Acronyms used in this User Manual

The table below describes the abbreviations / acronyms used in this user manual –		
ABBREVIATION	DESCRIPTION	
GUI, UI	Graphical User Interface, User Interface	
IPR	Intellectual Property Rights

Chapter - 1. INTRODUCTION

With the advent of hand-held digital devices anyone with a decent smartphone with a good camera can capture his / her memories digitally alleviating the need to print each photograph. However, each use case scenario has its blessings and limitations. Even though, in the world of today storage space is cheap, it still requires some amount of maintenance and house-keeping activities. This is where Duplicate Photo Cleaner[™] (DPC) enables you to search for duplicate photos so that you can delete them in one go.

Reference: To view our Duplicate Photo Cleaner[™] promotional video, visit <u>https://youtu.be/mAUO57Y3QmA</u>

1.1 Downloading the DPC Application Installer

You can download the Duplicate Photo Cleaner [™] application from the **Download** link available in the menu on the Duplicate Photo Cleaner [™] homepage as depicted in the figure below –

Figure 1 – Downloading the Duplicate Photo Cleaner™ application installer executable file

You can follow the installation wizard by launching the downloaded Duplicate Photo Cleaner[™] installer executable .dmg file to install the Duplicate Photo Cleaner[™] application on your system.

Tip: While installing Duplicate Photo Cleaner[™], you may be warned by macOS about a potential security risk since the executable file being installed has been downloaded from the internet. Please allow installing this application in the Security & Privacy section of your Mac System Settings.

The next chapter gets you started with the Duplicate Photo Cleaner [™] application that you just installed.

Chapter - 2. GETTING STARTED

Double click on the desktop icon of Duplicate Photo Cleaner[™] application. Your DPC application will be launched as depicted in the figure below –

Figure 2 – Duplicate Photo Cleaner[™] default screen

Below is a description of the screen elements of the default screen of the Duplicate Photo Cleaner[™] application.

1 Thi per	nis is the main toolbar of the DPC application. The main operations that you can erform using the options on the toolbar are as follows –
	 File – This option enables you to – Start a Scan in the standard view as depicted in the figure above. Exit – This option enables you to close from the DPC application. View – This option enables you to change the view of photos as they are displayed on your screen in all the modes on the scan details page. The available sub-options are described as follows –

Duplicate Photo Cleaner [™] v7.0 User Manual (For MacOS Users) v2.0 WM - DPCUM - 2.0

External Page | 12

NO.	DESCRIPTION
	 as Tree – Using this option, you can view the scan details as a tree; i.e., each of the duplicates are nested under their original photos. as Multiview – Using this option, you can view the scan details as thumbnailed list wherein each of the duplicates are listed to the right of their originals. Each thumbnail is also marked if it is Original or if it is a 100% duplicate of the original. as Theatre – Using this option, you can view the scan details in such a way the 80% of the screen displays the photo which is centered on the screen. Also, both the original photo thumbnails are listed along with their duplicates in the remaining 20% of the screen at the bottom as a slide list running from left to right. Help – This option enables you to perform the following actions – User Guide – Clicking this option enables you to view this user guide. Update – Clicking this option enables you to check if any updates of the DPC application are available. About – Clicking this option enables you to view your license information in case you have registered DPC application installation. This option also enables to and purchase a license key depending on the package of your choice. Also, this sub-option enables you to register you application installation and activate it after the system validates your license key successfully.
	Reference: To register your DPC application installation, refer to <u>Registering your DPC</u> Application Installation chapter by clicking this link.
	Reference: To activate your DPC application installation, refer to <u>Activating your DPC</u> Installation chapter by clicking this link.
	Reference: To enter a new key, refer to Entering a New Key chapter by clicking this link.
2	Clicking this scan type drop-down list enables you to specify the scan type you intend to perform. Chapters 7 to Chapter 11 describe each scan type in detail.
3	This section indicates the current state of your DPC installation. In this case where it says Activate, indicates that your current DPC installation is not registered and activated. Clicking the ACTIVATE button opens the Registration / Activation popup.
	Reference: An unregistered & inactivated DPC installation poses the 10-item clean limitation. To read more about this limitation, refer to the next sub-section.
	Reference: To register your DPC application installation, refer to <u>Registering your DPC</u> <u>Application Installation</u> chapter by clicking this link.
	Reference: To activate your DPC application installation, refer to <u>Activating your DPC</u> <u>Installation</u> chapter by clicking this link.

Duplicate Photo Cleaner [™] v7.0 User Manual (For MacOS Users) v2.0 WM - DPCUM - 2.0

External Page | 13

NO.	DESCRIPTION
4	Clicking this button opens the Settings panel.
	Tip: For a detailed description of the Settings panel, refer to <u>The Settings Panel Detailed</u> <u>Description</u> section.

2.1 The Settings Panel Detailed Description

This sub-section describes all tabs and all the provided parameters on each of these tabs on the Settings panel.

2.1.1 The General tab

The parameters available on the General are applicable on most of the common settings of the DPC application. Below are detailed descriptions of the General tab and its parameters as depicted in the figure below –

Figure 3 – Duplicate Photo Cleaner[™] settings panel – the General tab

Duplicate Photo Cleaner ™ v7.0 User Manual (For MacOS Users) v2.0	External
WM - DPCUM - 2.0	Page 14
Copyright © WebMinds, Inc. 2025. All Rights Reserved	

- General This tab includes all general settings that are application on DPC application.
 - Language This drop-down list enables you to change the language of you DPC application installation.
 - Display file size in This drop-down list enables you to specify the unit of measurement of data that is to be used to display the file size. e.g., In today's world, most images are measured in mega-bytes or MBs.
 - Appearance These mutually inclusive radio buttons enable you to specify which appearance theme is to be applied – i.e., Light, meaning the macOS light theme, Dark, meaning a macOS dark theme, or OS theme, meaning whatever the macOS theme is being used, that will be applied to DPC.
 - MultiView This slider enables you to specify the size of the thumbnail that is to be utilized while DPC creates a temporary thumbnail of the actual image in all scan types
 - Check for updates on startup This checkbox enables you to specify if DPC must check for updates when it is starting up
 - Maximize window on startup This checkbox enables you to specify if DPC must maximize its window when it is starting up
 - Disable protection against accidental deletion of all files in a group of 0 duplicates – Each group of duplicate photos identified in a scan contains the one photo with the best similarity percentages. In case the similarity percentages are identical then the shortest filename common in the group of the duplicate photos and / or the first file encountered satisfying the afore-mentioned conditions is considered as the original while the rest of the similar or identical photos are considered as duplicates. Now if we have selected these images & if we are trying to delete these photos, then DPC prevents us from deleting all of them by preserving the best candidate being considered as the original. This is how DPC keeps your photos safe & ensures that you never lose them forever due to a selection mistake. In other words, this is how DPC implements protection against accidental deletion of all files in a group of duplicates by default. In case you are sure of what you are doing, then you can select this checkbox to disabled this protection against accidental deletion of all files in a group of duplicates.

- Safe reverse selection (avoid selecting all elements in a group) Consider a scenario wherein just after performing a scan when you reach the scan details page and none of files / photos / images are selected and you click the Reverse selection option from the Select menu, then the following events will occur conditionally as described below
 - When Safe reverse selection is disabled In this case all images will be selected. Therefore, you risk losing your images in case the protection against accidental deletion of all files in a group of duplicates is also disabled.
 - When Safe reverse selection is enabled In this case one image; i.e., the photo with the best similarity percentages or the one with the shortest filename in each group of duplicate photos is deselected to keep it safe from being deleted accidentally.
- Cumulative selection On the scan details page, after DPC has identified duplicate photos along with their original photos, and suppose you make a few manual selections of files or even by using any of the options like Select all but newest or Select all but oldest, etc. available on the Select menu, in case this setting is disabled on the Settings panel, then each subsequent selection will deselect all previous selections made and then all matching photos will be selected depending upon the option specified from the Select menu. Conversely, if this setting is enabled then in the case described in this point, previous selections are retained and newer selections are also performed by DPC depending upon the option specified from the Select menu.
- Protect the Photos Library (allow scanning it only with the specialized Mac Photos Scan mode) – Selecting this option enables you to ensure that DPC allows you to scan the Photo Library only with the specialized Mac Photos Scan mode. In other words, you will not be able to select the Photos Library.photoslibrary database file while specifying a folder to scan in the scan modes other than the Mac Photos Scan mode if this option is set as checked.
- **Restore Defaults** Clicking this button reverts all settings to the default mode of DPC.
- OK Clicking this button saves the changes made and closes this panel
- Cancel Clicking this button ignores the changes made and closes this panel

2.1.2 The Scan Settings tab

The parameters available on the Scan Settings tab enable you to fine tune the scan algorithm to produce better scan results during image comparisons. Below are detailed descriptions of the Scan Settings tab and its parameters as depicted in the figure below –

Settings	×			
General Scan settings Logging Ignore list	Sounds Support			
Image Comparison: Fine-tune the scan algorithm to	get better scan results			
	🗸 Scan subfolders			
Bitmap size: 128x128 pixels	Remove empty folders			
	🗸 Skip hidden objects			
Analysis accuracy: balanced	Analyze embedded thumbnails			
	Use grayscale comparison			
Similarity threshold: 75%				
Search for duplicate images of the following types: Image Apple Icon Image (*.icns) Select all Image Bitmap Image Files (*.bmp) Reverse selection Image Camera Raw Image File (*.raw) Unselect all Image Canon Raw CIFF Image File (*.crw) Unselect all Image Canon Raw CIFF v2 Image File (*.cr2) Image Canon Raw CIFF v3 Image File (*.cr3)				
✓ Casio Raw Image File (*.dcm)				
Restore Defaults	OK Cancel			

Figure 4 – Duplicate Photo Cleaner[™] settings panel – the Scan Settings tab

- **Bitmap size:** This slider enables you to set the bitmap size. Consider a scenario in which your images are lesser in resolution that 128 x 128 px. In such a scenario it would make more sense to reduce the size of the bitmap which is lesser than 128 x 128 px.
- Analysis accuracy: This slider enables you to set the threshold of the accuracy of analysis
- Similarity threshold: This slider enables you to set the threshold of the similarity being checked
- **Scan subfolders:** This checkbox enables you to set if sub-folders and their contents are to be check as well or not.
- Remove empty folders: Consider a scenario in which DPC has identified duplicate photos and listed them along with their original counterparts. In case a folder containing duplicates is emptied after DPC has removed the duplicate photos, selecting this option in the Settings panel instructs DPC to remove the parent empty folder as well.

Duplicate Photo Cleaner [™] v7.0 User Manual (For MacOS Users) v2.0	External
WM - DPCUM - 2.0	
Copyright © WebMinds, Inc. 2025. All Rights Reserved	

- Skip hidden objects: This checkbox enables you to specify DPC to skip hidden items in a folder
- Analyze embedded thumbnails: EXIF thumbnails are thumbnails of images that are stored in the Exchangeable Image File Format (EXIF). i.e., each photo is associated with a Tagged Image File Format (TIFF) based 2-page file containing the meta data of the photo like the camera information on the first page and the second page containing the thumbnail. Therefore, while DPC analyzes a group of photos, if this option is enabled, then DPC takes lesser time to analyze each photo. This happens because DPC takes into consideration the EXIF data associated with the full resolution photo & utilizes the thumbnail in its scans instead of the full resolution photo thereby speeding up the scanning process.
- Use grayscale comparison: This checkbox enables you to specify whether DPC uses grayscale comparison method to scan for duplicate images.
- Search for duplicate images of following types: This easel enables you to which types of images are to be scanned for judging by their filename extensions.
 - Select all: This link enables you to select all types of image types in this easel.
 - **Reverse selection:** This link enables you to deselect the currently selected image types & select the unselected image types.
 - **Unselect all:** This link enables you to unselect all types of image types in this easel.
- Restore Defaults Clicking this button reverts all settings to the default mode of DPC.
- OK Clicking this button saves the changes made and closes this panel
- Cancel Clicking this button ignores the changes made and closes this panel

2.1.3 The Logging tab

The parameters on the Logging tab enable you to specify which events are to be logged and how may days of logs must be to be retained. Below are detailed descriptions of the Logging tab and its parameters as depicted in the figure below –

Settings									×
General	Scan settings	Logging	Ignore list	Sounds	Support				
Logging	level:								
Disable I	ogging				/arnings + E	rror message			
— Log	directory								
/Users	s/david/Library/Lo	gs/Duplicate	PhotoClean	er/			λ ο	pen Logs	
🗸 Aut	omatically delete log	g files older tha	an 🖣 7	► days					
Restore	Defaults						ок	Cance	el

Figure 5 – Duplicate Photo Cleaner[™] settings panel – the Logging tab

- Logging Level This slider enables you to set which types of application messages are to be logged (Disable logging / Error messages only / Warning + Error messages / All messages).
- Log directory This field enables you to specify the path to the folder where all application message logs are to be stored
- **Open Logs** Clicking this button enables you to view the contents of the logging folder where you can find all the application message logs.
- Automatically delete log files older than X days: This input control enables you to specify the number of days (X) for which the log files are to be retained. Files older than this value are discarded automatically for storage space optimization.
- **Restore Defaults** Clicking this button reverts all settings to the default mode of DPC.
- OK Clicking this button saves the changes made and closes this panel
- Cancel Clicking this button ignores the changes made and closes this panel

Duplicate Photo Cleaner [™] v7.0 User Manual (For MacOS Users) v2.0	External
WM - DPCUM - 2.0	Page 19

2.1.4 The Ignore List tab

The parameters on the Ignore List tab enable you to specify which of the files within a folder to be scanned that DPC must ignore while performing the scan operation. As depicted in the figure below this exclusion list overrides any other options set within the DPC application. i.e., DPC application will not allow you to perform a scan, rename any contained file, and move or delete files in the specified folders.

Warning: You need to be extremely vigilant before performing a system wide scan. i.e., you must exclude all system folders as depicted in the figure below, before performing a system wide scan. It is not recommended to perform a system wide scan as DPC runs the risk of deleting images or photos being used in the stable functioning of your system.

Below are detailed descriptions of the Ignore List tab and its parameters as depicted in the figure below –

Figure 6 – Duplicate Photo Cleaner[™] settings panel – the Ignore List tab

- Add Clicking this button enables you to add a folder to this ignore list
- Add Mask Clicking this button enables you to add a string as a mask or wildcard entry to the ignore list. While performing a scan, DPC will check for any folder name containing this string and automatically ignore such a folder.
- Remove After selecting a folder from the easel below, clicking this button enables you to remove that folder from this ignore list
- Clear Clicking this button enables you to remove all specified folder in this ignore list
- Restore Defaults Clicking this button reverts all settings to the default mode of DPC.
- OK Clicking this button saves the changes made and closes this panel
- Cancel Clicking this button ignores the changes made and closes this panel

Duplicate Photo Cleaner ™ v7.0 User Manual (For MacOS Users) v2.0ExternalWM - DPCUM - 2.0Page | 20

2.1.5 The Sounds tab

The parameters on the Sounds tab enable you to specify the mp3 audio files to be played for each of the three events as described in the bulleted list below the figure. Below are detailed descriptions of the Sounds tab and its parameters as depicted in the figure below –

Settings		×
General Scan settings Lo	aging Ignore list Sounds Support	
Sound notifications		
Please specify the music files	to be played when the steps below are completed	
Directory scanning		X Q ▶ ■
File processing		× Q ► ■
Scan complete		X Q ► ■
Restore Defaults		OK Cancel

Figure 7 – Duplicate Photo Cleaner[™] settings panel – the Sounds tab

- Directory scanning Clicking the Magnifying glass button enables you to navigate to an mp3 file which you can set for DPC to play when directory scanning is complete. Clicking the triangle Play button enables you to preview the mp3 audio file while the square Stop button stops the file you are previewing to stop playing.
- File processing Clicking the Magnifying glass button enables you to navigate to an mp3 file which you can set for DPC to play when file processing is complete. Clicking the triangle Play button enables you to preview the mp3 audio file while the square Stop button stops the file you are previewing to stop playing.
- Scan complete Clicking the Magnifying glass button enables you to navigate to an mp3 file which you can set for DPC to play when the specified scanning is complete. Clicking the triangle Play button enables you to preview the mp3 audio file while the square Stop button stops the file you are previewing to stop playing.
- **Restore Defaults** Clicking this button reverts all settings to the default mode of DPC.
- OK Clicking this button saves the changes made and closes this panel
- Cancel Clicking this button ignores the changes made and closes this panel

2.1.6 The Support tab

The parameters on the Support tab enable you to prepare application specific detailed data in case your DPC application installation runs into an erroneous event. The Zip archive created by this tab is saved your system's Documents folder which you can share with our support team. Below are detailed descriptions of the Support tab and its parameters as depicted in the figure below –

Settings	×
General Scan settings Logging Ignore list Sounds Support	
Please click the button below to prepare the information our support team needs to resolve your issue. Only application logs and settings will be collected.	
A Zip archive will be created in your Documents folder. If it is too large to send via our ticket system please send it to paul@webminds.com using <u>www.dropsend.com</u> and reference your ticket number from here.	
Prepare data	
Restore Defaults OK	Cancel

Figure 8 – Duplicate Photo Cleaner[™] settings panel – the Support tab

- Prepare data Clicking this button collects all application specific data and saves it as a Zip archive in your system's Documents folder which you can share with our support team.
- **Restore Defaults** Clicking this button reverts all settings to the default mode of DPC.
- OK Clicking this button saves the changes made and closes this panel
- Cancel Clicking this button ignores the changes made and closes this panel

2.2 Limitations of Utilizing an Unregistered DPC Application in Trial Mode

The trial version of Duplicate Photo CleanerTM offers unlimited scanning for duplicates and similar images in all scan types. You can then delete up to 10 duplicate groups with the trial version.

Therefore, it makes more sense to purchase a license package as per your usage requirements and specific use case scenario.

2.3 Performing General Functions during all Scan Types

The main toolbar provides additional general functions that you can perform on the results list which are common to all scan types. The following sub-sections describe steps that enable to utilize these additional general functions.

2.3.1 Saving a Scan

The steps described below enable you to save scan results as a file for later use -

 Run a scan and wait for Duplicate Photo Cleaner[™] to view the scan summary page as depicted in the figure below –

Duplicate Photo Cleaner [™] v7.0 User Manual (For MacOS Users) v2.0	Externa
WM - DPCUM - 2.0	Page 23

2. Click on the GO FIX THEM button. The results screen is displayed as depicted in the figure below –

Figure 10: Scan Results page

3. From the main toolbar click on Export > Save Scan option. The Save dialog box is displayed which you can utilize to navigate to a folder location of your choice. Then you can specify a name for the scan data file and click Save. This is how you can save your scan details to your computer.

2.3.2 Importing a Scan

The steps described below enable you to import a saved scan -

1. After you launch the DPC application, the default screen is displayed as depicted in the figure below –

Figure 11 – DPC application default screen – Importing a saved scan

2. Click Import Scan as depicted in the figure above. The Import dialog box is displayed which you can utilize to navigate to the folder where you saved your scan results.

3. Select the scan data file and click Import. The scan results are successfully imported and the scan summary page is displayed as depicted in the figure below –

Figure 12: Scan Summary page – saved scan data file successfully imported

4. Click on the GO FIX THEM button. The results screen is displayed as depicted in the figure below –

Figure 13: Scan Results page

Now you can perform all general functions described in the following sections.

Duplicate Photo Cleaner [™] v7.0 User Manual (For MacOS Users) v2.0	External
WM - DPCUM - 2.0	Page 26

2.3.3 Viewing Modes Available for the Results on the Scan Details page

This sub-section describes all viewing modes available for the scan results that are displayed on the scan details page as depicted in the figure below –

 View as Table – This is the tabulated format in which the left column lists the original photos while the right column lists the duplicates as depicted in the figure below. Clicking this option enables you to select all duplicate images found in tabulated format as depicted in the figure below.

Figure 14: Viewing modes available for scan results on the scan details page

Tip: You can also click the Swap Images button available between the displayed original and duplicate image on screen in case you intend to keep the duplicate file while doing away with the original. This feature is not available in the Folder Comparison & Fragment Search Scan Modes. View as Tree – This is the tree formatted scan details result output in which the original photos are listed as parent nodes while the duplicates of each of the original photos are listed nested as children to the parent node as depicted in the figure below. Clicking this option enables you to view all the original photos as well as the duplicates photos in Tree format as depicted in the figure below.

Tip: You can also click the Swap Images button available between the displayed original and duplicate image on screen in case you intend to keep the duplicate file while doing away with the original. This feature is not available in the Folder Comparison & Fragment Search Scan Modes.

 View as MultiView – This is the multi-view format in which the original photos are listed first from left to right followed by their duplicates. Each file is label as whether it is an original or if it is a duplicate, then the match percentage is displayed as the label as depicted in the figure below. Clicking this option enables you to view the original photos as well as the duplicate photos in multi-view format as depicted in the figure below.

Figure 16: Viewing as MultiView

 View as Theatre – This is the theatre or slide-show format in which the original photos are listed first from left to right followed by their duplicates as depicted in the figure below. Clicking this option enables you to view the original photos as well as all duplicate images found in theatre format as depicted in the figure below.

Figure 17: Viewing as Theatre

2.3.4 Performing Multiple Types of Selections on the Scan Results page

This sub-section describes all the selection types that you can perform on the scan results that are displayed on the scan details page as depicted in the figure below –

Figure 18: Multiple selection types available for scan results

- Select duplicates Clicking this option enables you to select all duplicate images found
- Select originals Clicking this option enables you to select all original images
- Clear selection Clicking this option enables you to clear selection on this page
- Reverse selection Clicking this option enables you to reverse selections i.e., all selected images are unselected and all unselected images are selected
- Select high resolution images Clicking this option enables you to select high resolution images; i.e., images or photos with a high width x height value are selected when this option is clicked.
- Select low resolution images Clicking this option enables you to select low resolution images; i.e., images or photos with a low width x height value are selected when this option is clicked.

Duplicate Photo Cleaner ™ v7.0 User Manual (For MacOS Users) v2.0ExternalWM - DPCUM - 2.0Page | 31

• Select the largest file size – Clicking this option enables you to select the image with the largest file size

Note: Selecting this option will not select any file if all selectable files in the group are the same size. For example, you have 3 files in a group - file A is 1 MB, file B is 1 MB, and file C is 1 MB. Since files A, B and C are the same size, DPC cannot decide which of these three files is the smallest, so it does not select any of them.

- Select the smallest file size Clicking this option enables you to select the image with the smallest file size
 - Note: Selecting this option will not select any file if all selectable files in the group are the same size. For example, you have 3 files in a group - file A is 1 MB, file B is 1 MB, and file C is 1 MB. Since files A, B and C are the same size, DPC cannot decide which of these three files is the smallest, so it does not select any of them.
- Select all but oldest Clicking this option enables you to select all images except the oldest image found
- Select all but newest Clicking this option enables you to select all images except the newest image
- Select images with tags Tags are attributes that can be added to a few file types like image files, music files, video files, and some Microsoft Office files, though, not all file types support tags, so it is an inconsistent method to group all types of files but proves useful when it is available with the afore mentioned file types especially photos. You can manually right-click on a photo file and navigate to Properties > Details > Tags. Then you can add tag to the file being operated upon. Clicking this option enables you to select images with tag information populated against the tags detail in the file properties of the photo or image file.
- Select images without tags As described above, and in short, tags are attributes you
 can add to each of the photo file as described in the previous point. Clicking this option
 enables you to select images without tag information populated against the tags detail
 in the file properties of the photo or image file.
- Select files with original names In a scan result on the scan details page where the original photos are listed along with their duplicate counterparts, we see that the original file is typically has the shortest file name among similar file names in a group of original and duplicate photos. For example, if we have a group of files "A.jpg", "A (1).jpg" and "A Copy.jpg" then the original name is "A.jpg". Clicking this option enables you to select files with original names

2.3.5 Exporting your Scan Result Details as a File

This sub-section describes all the types of scan result details export that you can perform on the scan results that are displayed on the scan summary page –

Figure 19: Multiple export types available for scan results

 Export to TXT – Clicking this option enables you to export selected file details as a text file. Once you have exported the selected file details as a Text file, after opening this file in notepad, the output includes key details of the scan along with a table depicted both original files listed with their duplicates as depicted in the figure below –

Figure 20: Scan result details exported as a Text file

Duplicate Photo Cleaner [™] v7.0 User Manual (For MacOS Users) v2.0 WM - DPCUM - 2.0

External Page | 33

 Export to CSV – Clicking this option enables you to export selected file details as a Comma Separated Values (CSV) file. Once you have exported the selected file details as an CSV file, after opening the CSV in your MS Excel application, the output includes key details of the scan along with a table depicted both original files listed with their duplicates as depicted in the figure below –

Figure 21: Scan result details exported as a CSV file

 Export to HTML – Clicking this option enables you to export selected file details as a Hyper Text Markup Language (HTML) file. Once you have exported the selected file details as an HTML file, after opening the HTML file in your default web browser the output includes key details of the scan along with a table depicted both original files listed with their duplicates as depicted in the figure below –

Figure 24: Scan result details exported as an XLSX file

 Save Scan – Clicking this option saves the displayed scan results file as a scan data file. The scan data file format is proprietary to Duplicate Photo Cleaner[™] application and its product owners. While the Export types are consumable by the end users of this application as indicated in the previous points, the scan data file can only be consumed by the Duplicate Photo Cleaner[™] application directly. i.e., we can only view the contents of the scan data file after it has been imported into the DPC application using the Import a scan option.

Tip: For more information on importing a scan, refer to <u>Importing a Scan</u> section.

Clearing the Displayed Scan Results from Scan 2.3.6 **Results** page

This sub-section describes the two types of scan results clearing operations that you can perform on the scan results page as depicted in the figure below -

- Remove selected from the results list Clicking this option removes the selected files from the scan results list
- Remove resolved from the results list Clicking this option removes the resolved files from the scan results list

2.3.7 Using the Mouseover Menu on the Image Preview

When you are previewing any image original or duplicate on the scan details page, hovering your mouse cursor over the image preview available on the scan details page, the mouseover menu is displayed as depicted in the figure below –

Here is a description of the actions you can perform using the buttons available on this menu -

Move – Clicking this button opens the Move to Folder popup.

Reference: For more information, refer to Performing a Move Duplicates Action section.

- Preview Clicking this button opens the Preview screen and displays this file.
- Delete Clicking this button opens the Delete selected popup which enables you to delete this file.

Reference: For more information, refer to <u>Performing a Delete Duplicate Photos Action</u> section.

2.3.8 Scan Detail Page Actions Menu Descriptions

While performing the 7 types of scans that the macOS based Duplicate Photo Cleaner[™] application performs, this section describes the scan detail page actions menu. This actions menu provides buttons for specific functions that are described in the following sub-sections and depicted in the figure below –

Figure 25 – Scan Details Page Action buttons

BUTTON	BUTTON NAME	DESCRIPTION
\cap	Coordh	Clicking this button enables you to Search the within the original and duplicate photos listed on the scan details page.
\triangleleft	Search	Reference: For a detailed information on this button, refer to <u>Performing</u> <u>a Search / Filter Duplicates Action</u> section.
*	D.A.a.v.a	Clicking this button enables you to Move duplicate photos as listed on the scan details page to a folder of your choice.
↓	wove	Reference : For a detailed information on this button, refer to <u>Performing</u> <u>a Move Duplicates Action</u> section.
0	Link	Clicking this button enables you to replace duplicate photos with symbolic links to the original photo as listed on the scan details page.
Ċ,	LINK	Reference: For a detailed information on this button, refer to <u>Performing</u> <u>a Link Duplicate Photos to Original Photos Action</u> section.
ាញា	Delete	Clicking this button enables you to Delete selected duplicate photos as listed on the scan details page.
W	Delete	Reference : For a detailed information on this button, refer to <u>Performing</u> <u>a Delete Duplicate Photos Action</u> section.
	. U. d.	Clicking this button enables you to Undo your previous actions that you perform on the duplicate photos listed on the scan details page.
\sim	Undo	Reference: For a detailed information on this button, refer to Performing an Undo Action section.
		Clicking this button enables you to open the settings panel of DPC.
දරූ	Settings	Reference : For a detailed information on this button, refer to <u>Opening the</u> <u>Settings Panel</u> section.

Duplicate Photo Cleaner [™] v7.0 User Manual (For MacOS Users) v2.0 WM - DPCUM - 2.0

2.3.8.1 Performing a Search / Filter Duplicates Action

Consider a scenario where in you performed a Standard Scan, say for example, and then you want to search for duplicates of a specific photo. In this case you can click the Search button from Scan Detail Page Actions Menu on the top right-hand corner scan details page. The Search / Filter Duplicates popup is displayed as depicted in the figure below –

Search / Filter duplic	ates						×
File path and name	OR	NOT					
Use symbol "*" for a	ny string and symbol	"?" for any s	single character				
Similarity value	OR	NOT			20 %		%
Modified	OR	NOT			30-12-1899 🔽		99 🔽
File size	OR	NOT					
EXIF information	OR	NOT		*			
Search	Filter duplicate list					Cance	el

Figure 26 – Search / Filter duplicates popup

Using this popup you can perform the following searches -

- By Filter path and name
- By Similarity value
- By Modified (Date)
- By File size
- By EXIF information

Searching by Filter path and name

The steps below enable you to search for duplicates by filter path and name -

 Click the File path and name checkbox. The sub-options displayed to right of this checkbox will be enabled as depicted in the figure below –

Search / Filter duplicate	es					×
File path and name	OR	NOT				
Use symbol "*" for any	string and symbol	"?" for any	single character			
Similarity value	OR	NOT		20 %		%
Modified	OR	NOT		30-12-1899 🔻)
File size	OR	NOT				
EXIF information	OR	NOT				
Search	Filter duplicate list				Cancel	

Figure 27 – Search / Filter duplicates by file path and name

Duplicate Photo Cleaner [™] v7.0 User Manual (For MacOS Users) v2.0	External
WM - DPCUM - 2.0	Page 40
Copyright © WebMinds, Inc. 2025, All Rights Reserved	

- Now let us try to remove specific duplicates from the duplicate photos list (and not the folder) by specifying the most common string in all the related duplicate photo filenames.
- 3. In our test case, let's say we intend to remove all duplicates from the duplicate photo list (and not from their folders) which match the string "Uncle Jaswant & Aunty Neelam" as this search / filter string is common in the original and the group of its duplicates.
 - Tip: Using wildcard symbols * and ? can help us specify our search string accurately. The * wildcard symbol indicates any one or more characters while ? wildcard symbol signifies only one character.
- 4. To do so, we can specify * before my search string "Uncle Jaswant & Aunty Neelam" which would mean that the file path as well as the filename is signified by the first * wildcard symbol while when we use this * symbol after the search string then the filename can have any number of characters after the search string. i.e., our complete search string become as indicated below –

Uncle Jaswant & Aunty Neelam

 Now let us go ahead and type this in the search string text field provided as depicted in the figure below –

Search / Filter duplicates							×	
File path and name Use symbol "*" for any str	OR	NOT	*Uncle Jaswant &	४ Aunty Neela	ım*∣			
Similarity value	OR	NOT	between	*		% -		%
Modified	OR	NOT	between	*	30-12-1899	v -	30-12-1899	
File size	OR	NOT	equal	*				*
EXIF information	OR	NOT		*				
Search Fil	ter duplicate list						Cancel	

6. Notice if you select the OR checkbox here and then you click **Filter duplicate list** then there is no change to the duplicate photo list. This is because the duplicate list already contains all duplicates of the related original both with and without this search string text.

 But in case we use the NOT checkbox, then the duplicate photos with the specified search string will be removed from the duplicate photos list as depicted in the figure below –

Search / Filter duplica	ites						×
File path and name	OR	NOT	*Uncle Jaswant 8	& Aunty Neelam			
Similarity value	OR	NOT	between	¥	20 %		%
Modified	OR	NOT	between	❤ 3	0-12-1899 🔻		V
File size	OR	NOT					
EXIF information	OR	NOT		*			
Search	Filter duplicate list					Cancel	

8. Now when we click Filter duplicate list then all duplicate photos matching the specified search / filter criteria will be removed from the duplicate photos column.

By Similarity value

While performing the standard scan on my Test Folder I had specified a Similarity percentage of 75%. But after the scan completed, the scan details page shows duplicates with multiple similarity percentages. Now let's say I want to find if any of the photos have a similarity percentage between 20% and 99%.

Here's how we can specify that using the Search / Filter popup -

 So now picking up from the freshly performed standard scan, let us click the Similarity value checkbox. The adjacent options are enabled as depicted in figure below –

Search / Filter duplic	cates							×
File path and name Use symbol "*" for a	OR ny string and symbol	NOT "?" for any	* single character					
Similarity value	OR	NOT	between	*	20	% -	20	%
Modified	OR	NOT	between	*	30-12-1899	1 -	30-12-1899	V
File size	OR	NOT		*				¥
EXIF information	OR	NOT		*				
Search	Filter duplicate list						Cancel	

Figure 30 – Search / Filter duplicates by similarity value

Tip: After you make selections on this popup you can choose to let this popup persist on the screen. To do so, click Search but in case you intend to close this popup and view the searched / filtered results, then you can click Filter duplicate list.

Duplicate Photo Cleaner ™ v7.0 User Manual (For MacOS Users) v2.0	External
WM - DPCUM - 2.0	Page 42
Copyright © WebMinds, Inc. 2025, All Rights Reserved	

- 2. Let us specify between 20% and 99% to check if any duplicate photo identified by DPC is lesser in similarity value than 100%.
- 3. To do so, click the between drop down and select between option and then specify 20% in the first percentage specification box and 99% in the second percentage specification box.
 - Tip: If you place your mouse cursor over the first similarity percentage specification box and then you keep the left button of your mouse pressed and you move the mouse to the left then you can see the percentage value decreasing from the current value. But since we cannot specify any similarity value lesser than 20% nothing will happen here. But let us try this same action on the second percentage specification box. But this time let us move our mouse cursor to the right after we keep the left mouse button pressed. We will notice that the value starts increasing post 20%.
- 4. Let us specify the 99% similarity value in the second percentage specification box.
- 5. Thus, our search / filter criteria is –

Similarity Value between 20% and 99%

 Now click the Filter duplicate list. All duplicate photos with the similarity percentage value of 100% are removed from the duplicate photos list as depicted in the figure below –

Figure 31 – Search / Filter duplicates by similarity value between 20% and 99%

Similarly, we can also use the OR and NOT checkboxes as described in the previous subsection.

Duplicate Photo Cleaner [™] v7.0 User Manual (For MacOS Users) v2.0	External
WM - DPCUM - 2.0	Page 43
Copyright © WebMinds, Inc. 2025. All Rights Reserved	

By Modified (Date)

You can utilize the same logic described in the By Similarity Value sub-section for the modified date checkbox as well.

By File size

You can utilize the same logic described in the By Similarity Value sub-section for the file size checkbox as well.

By EXIF information

You can utilize the same logic described in the By Similarity Value sub-section for the EXIF information checkbox as well. The minor difference being that the logic drop-down lists all EXIF meta data options like artist, author. You can select any one of them at a time and then specify a search / filter string with or without the wildcard * or ? symbols to develop your own search / filter criteria.

Note: By now we have done most of the logical operations like OR, NOT, equal to, between, less than, larger than, etc. except one – The AND logical operation. This is where you will see than that you can select multiple checkbox criteria on the Search / Filter duplicates popup and then the AND logical operand concatenates or joins two or more search filter criteria. Notice that on step 4 of performing these actions you can see the filter criteria that you have specified. This is where you can evaluate the logic that DPC will utilize while Searching / Filtering duplicate photos basis your composite Search / Filter criteria. E.g., Similarity value equal to 100% AND Modified between Date1 and Date 2.

2.3.8.2 Performing a Move Duplicates Action

Consider a scenario where in you performed a Standard Scan, say for example, and then you intend to move all duplicates with similarity percentage less than 100% to a separate folder. In this case you can click the Move button from Scan Detail Page Actions Menu on the top right-hand corner scan details page. The Search / Filter Duplicates popup is displayed as depicted in the figure below –

Warning: In case you have not selected any duplicate files, DPC will display a popup stating that nothing is selected.

So let us retrace our steps a few steps behind. Perform the standard scan (or any other scan as per your choice) and reach the scan details page as depicted in the figure below –

Figure 33 – Scan Details page

Duplicate Photo Cleaner [™] v7.0 User Manual (For MacOS Users) v2.0	
WM - DPCUM - 2.0	

External Page | 45

Here's how we can approach our requirements -

First, let us isolate all duplicate photos with similarity value percentage as 100%. And then we can perform the Move action on the isolated duplicate photos with similarity percentage equal to 100%.

Here are the steps that enable you to do so -

- 1. From the Select menu, click the **Select duplicates** option. All duplicate photos will be selected.
- Now let us utilize the Search / Filter popup to isolate all duplicate photos with similarity percentage value as 100%. To do so, click Search from the Scan details page action menu on the top right-hand corner of the screen. The Search / Filter popup is displayed.
- 3. Using this popup specify Similarity value equal to 100% as depicted in the figure below -

Duplicate Photo Cleaner [™] v7.0 User Manual (For MacOS Users) v2.0	External
WM - DPCUM - 2.0	Page 46
Copyright © WebMinds, Inc. 2025. All Rights Reserved	

 Click Filter duplicate list. All duplicate photos with the Similarity percentage value equal to 100% will remain and all other duplicate photos with this value lesser than 100% will be revied from the duplicate photos list as depicted in the figure below –

Figure 35 – Scan Details page – all duplicates with Similarity percentage value equal to 100%

Tip: To revisit or change your search / filter criteria, click the **pencil icon** as indicated by the red arrow in the figure above. This will open Search / Filter duplicates popup.

 Since these duplicate photos are already selected, click Move from the scan details page actions menu available on the top right-hand corner of the screen. The Move to Folder popup will be displayed as depicted in the figure below –

Figure 36 – Move to Folder popup

Duplicate Photo Cleaner [™] v7.0 User Manual (For MacOS Users) v2.0	External
WM - DPCUM - 2.0	Page 47
Copyright © WebMinds, Inc. 2025. All Rights Reserved	

6. Click **Browse** to specify a folder location of your choice and click **Continue**.

Tip: In case there are sub-folders within this folder which contain duplicate photos, select the Keep folder structure checkbox to retain the folder structure after these duplicate photos are moved.

7. After you click **Continue**, the duplicate photos with similarity value equal to 100% that we isolated will be moved to the folder you specified. And, thus they will be removed from the current duplicate photos list.

Tip: Click **Cancel** to abort recipient folder specification action. The recipient folder is the folder to which your selected duplicate folder would be moved to.

2.3.8.3 Performing a Link Duplicate Photos to Original Photos Action

By definition, a symbolic link is a link to a file or directory on the same or different volume (drive letter) or even to a remote file or directory (using universal naming convention or UNC in its path).

Consider a scenario where in you performed a Standard Scan, say for example, and then you intend to link all duplicates as symbolic links to the original photo. In this case here is how we can to do –

 First, let us select all the duplicate photos. To do so, click Select duplicates from the Select Menu. All duplicate photos will be selected on the scan details page as depicted in the figure below –

Figure 37 – Selecting all duplicate photos on the scan details page

Duplicate Photo Cleaner [™] v7.0 User Manual (For MacOS Users) v2.0	External
WM - DPCUM - 2.0	Page 48
Copyright © WebMinds, Inc. 2025. All Rights Reserved	

 Click the Link button from Scan Detail Page Actions Menu on the top right-hand corner scan details page. A confirmation message popup is displayed as depicted in the figure below –

Figure 38 – Link menu options – Symbolic link

3. Click OK to continue replacing the duplicate photos with symbolic links or you can click Cancel to abort this action.

To the end user a symbolic link functions in the same way the original photo of such a link would behave but this ultimately results in optimization of storage space & alleviates duplicity of photos across multiple folders.

Tip: In case you encounter an error while performing the linking operation, the Duplicate Photo Cleaner[™] application will direct you to view the log file which you can access by clicking the Settings button and then after you navigate to the Logging tab on the Settings panel, click Open logs as depicted in the figure below –

Settings		4						
General	Scan settings	Logging	Ignore list	Sounds	Support			
Logging	level:							
Disable l	ogging							
— Log	directory							
C:\Us	ers\Administrato	r\AppData\Ro	aming\Dupli	icatePhotoC	leaner\Log	IS	- <u>-</u>	Open Log
🗸 Au	tomatically delete	log files older	than 🔺 :	7 🕨 day				
Restore	Defaults						OK	

Figure 39 – Viewing the log file after encountering an error

2.3.8.4 Performing a Delete Duplicate Photos Action

Consider a scenario where in you performed a Standard Scan, say for example, and then you intend to delete all duplicates photos.

Here are steps that enable you to delete the duplicate photos -

1. After you click the **Go Fix Them** button on the scan summary details page, the scan details page is displayed as depicted in the figure below –

Warning: As a best practice, always backup your photo files & folders before you perform any such operation.

2. Click **Select**, then click **Select duplicates** from the Select menu. The duplicate photos are selected as depicted in the figure below –

Figure 41 – Scan Details page – Selected all duplicate photos

3. Now from the Scan Details page action menu available on the top right-hand corner of the screen, click the **Delete** button. The Delete selected popup is displayed which prompts you to specify your choice by selecting between moving the files to trash bin or to permanently delete these files as depicted in the figure below –

Figure 42 – Scan Details page – Selected all duplicate photos

Duplicate Photo Cleaner [™] v7.0 User Manual (For MacOS Users) v2.0 WM - DPCUM - 2.0

External Page | 52

 Specify your choice and click Yes. All duplicate photos are moved to trash as depicted in the figure below –

Figure 43 –Scan Details page – deleted all duplicate photos as per your selection

Tip: It is important to note here that if you selected the Move to Trash operation then you will be able to undo this operation. But in case you selected the Delete permanently option then you cannot undo this operation.

2.3.8.5 Performing an Undo Action

The Duplicate Photo Cleaner[™] application provides the Undo action feature using which you can undo all actions which are reversable and done in a sequence without a new scan being performed in this sequence. i.e., the user can perform unlimited Undo actions if no new scan is performed or no irreversible action has been performed in the sequence of actions. An example has been shared in the Tip above.

Consider a scenario in which we intend to perform multiple tasks with the identified duplicate photos in the below fashion –

- 1. First, we isolate all duplicate photos with similarity percentage value between 90% and 94% and we intend to delete these duplicate photos permanently.
- Then, we intend to move all duplicate files with similarity percentage value between 95% and 99% to a separate folder of our choice.
- 3. And finally, we move all duplicate photos to recycle bin with similarity percentage value equal to 100%.

Warning: Consider in the above example, if we delete all duplicate photos permanently instead of moving them to trash, then the whole Last-In-First-Out (LIFO) Undo Actions Stack is lost as the First Out step itself is irreversible. In other words, only a sequence of unlimited reversible actions can be undone so long as a new scan performed.

Now after we have performed the actions in steps 1 through 3, try to undo these actions one by one by clicking the Undo button from the Scan Details page actions menu. Each of these actions will be reversed successfully.

Reference: Refer to previous sub-sections to perform steps 1 through 3.

2.3.8.6 **Opening the Settings Panel**

The settings panel includes all general features which are applicable to specific areas of the Duplicate Photo Cleaner[™]. On a case-to-case basis after you perform any of the scan types, you may require to switch on / off one or more features of the Duplicate Photos Cleaner[™] application. E.g., Disable protection against accidental deletion of all files in a group of duplicates, Or Safe reverse selection (avoid selecting all elements in a group), Cumulative selection, etc.

Click the Settings button on the Scan Details Page Actions menu available on the top right-hand corner of the screen on the Scan Details Page Action menu available on the scan details page. The Settings panel is displayed as depicted in the figure below –

Settings					×

Chapter - 3. REGISTERING YOUR DPC APPLICATION INSTALLATION

The steps described below enable you to place a **Buy Now** request of the Duplicate Photo Cleaner[™] application via the Duplicate Photo Cleaner[™] homepage –

You can place a Register request in the following 2 ways -

3.1 Via the DPC Homepage

The steps described below enable you to register the DPC application via the DPC homepage -

 From the DPC application homepage, click the Support > Register Your Product link available in the menu on the DPCTM homepage as depicted in the figure below –

Figure 45 – Registering your DPC application installation via the DPC[™] homepage

2. Click **Register** as depicted in the figure above. The register your software form is displayed as depicted in the figure below –

	HOME	FEATURES 🕶	DOWNLOAD	UPGRADE	SUPPORT -
Duplicate Photo Cleaner [™] makes it easy to find and delete annoying duplicate photos. The program will not only find exact duplicates, but also detect similar images and help you organize your photo library. To use Duplicate Photo Cleaner [™] please register now. Registering your copy will also give you access to exclusive deals and promotions. Having trouble registering or activating your license? Please visit our Support Area and read our Quick Start Guide for help and information. *We will never share your information with anyone outside of our company. Chapter - 6. PERFORMING A STANDARD SCAN

In today's world most of us are busy collecting memories via SLR Cameras & Smartphones. Little do we realize that even though storage space is cheap it does require some effort in its maintenance. Performing this maintenance becomes a time-consuming chore especially when we use the burst mode in both these afore mentioned devices. Thus, we are prone to having duplicate images / photos of the same photo profile. E.g., the photo of the flight of an eagle, the photo of two elephants dueling during the mating season, etc. It is in situations like these that the Duplication Photo Cleaner[™] application enables you to quickly scan for duplicate images and photos and optimize your photo library.

The steps described below enable you to perform a Standard Scan -

1. After you launch the Duplicate Photo Cleaner[™] application, the default screen is displayed as depicted in the figure below –

Figure 63 – Performing a Standard Scan – DPC default screen

Below are the functions along with a description of the parameters that you can tweak before you start a standard scan –

- Select folder Clicking on the blue folder icon or by dragging a folder and dropping it in the area as depicted in the figure above, enables you to select a target folder which is to be scanned
- Clear List Clicking this button clears the target folder list

Duplicate Photo Cleaner [™] v7.0 User Manual (For MacOS Users) v2.0	External		
WM - DPCUM - 2.0	Page 68		
Copyright © WebMinds, Inc. 2025. All Rights Reserved			

- File Types Clicking the Select button in this area as depicted in the figure above enables you to specify which file types are to be scanned for duplicates
- File Size Limits Specifying the maximum & minimum file sizes enables you to specify the size range of the files to be scanned. You can switch on the maximum & minimum limit applicability by swiping the slider button from left to right. Then you can specify the numerical values for both maximum & minimum limits and select the adjacent drop-downs to specify whether the limits must be considered in bytes (B), kilobytes (KB), megabytes (MB), or gigabytes (GB). After you specify the values in the fields described above, you will notice that the slider below changes to depict the whether the limits chosen signify Tiny, Small, Medium, Large, or Huge. Conversely, you can also use this slider instead of specifying the maximum & minimum limits
- Similarity Threshold You can utilize this slider to set the similarity threshold percentage which is to be set while searching for duplicate images
- 2. Click the blue folder icon or drag & drop a target folder that you intend to scan. The specified folder is selected and listed in target folder list as depicted in the figure below

Figure 64 – Selecting one or more folders

Tip: You can add more folders in the target folder list by clicking the green Add folders button as depicted in the figure above.

Reference: To export your scan results details as a file, refer to <u>Exporting your Scan Result</u> <u>Details as a File</u> section.

Reference: To clear the displayed scan results, refer to <u>Clearing the Displayed Scan Results</u> <u>from Scan Results page</u> section.

Tip: You can also click the Swap Images button available between the displayed original and duplicate image on screen in case you intend to keep the duplicate file while doing away with the original.

 After you have selected the duplicate files that you intend to delete or move or in case you intend to replace the duplicate files with symbolic links, from the top right-hand corner on the scan results page, click the corresponding buttons as depicted in the figure below –

Figure 67 – Scan Details Page Actions Menu

Reference: Refer to <u>Scan Detail Page Actions Menu Description</u> section for a detailed description of the buttons available on the Scan Details Page Actions Menu.

The next chapter describes steps that enable you to Perform a Folder Comparison.
Chapter - 7. PERFORMING A FOLDER COMPARISON

While creating multiple albums, we may end up including the same photos or their duplicates in multiple albums. In such a scenario often, we find encounter duplicate photos which occupy storage space unnecessarily. Now it would make sense to remove such duplicate photos but a better resolution of such images would be to perform a folder comparison and link the duplicate photos as symbolic links. In this way we free up precious storage space and yet retain the file in the original folder and the symbolic link in the other folder.

The steps described below enable you to perform a Folder Comparison -

 After you launch the Duplicate Photo Cleaner[™] application, the default screen is displayed as depicted in the figure below –

Figure 68 – Performing a Folder Comparison scan – DPC default screen

 From the top right-hand corner click the Scan Mode drop-down and select the Folder Comparison option. The Folder Comparison page is displayed as depicted in the figure below –

Figure 69 – Selecting the Folder Comparison option

3. Select the Source and the Target Folders by clicking the corresponding blue folder icons

Below are the functions along with a description of the parameters that you can tweak before you start a standard scan –

- Select folder Clicking on the blue folder icon or by dragging a folder and dropping it in the corresponding area as depicted in the figure above, enables you to select a source as well as a target folder which is to be scanned
- Clear List Clicking the corresponding button clears the source and target folder lists
- File Types Clicking the Select button in this area as depicted in the figure above enables you to specify which file types are to be scanned for duplicates
- File Size Limits Specifying the maximum & minimum file sizes enables you to specify the size range of the files to be scanned. You can switch on the maximum & minimum limit applicability by swiping the slider button from left to right. Then you can specify the numerical values for both maximum & minimum limits

and select the adjacent drop-downs to specify whether the limits must be considered in bytes (B), kilobytes (KB), megabytes (MB), or gigabytes (GB). After you specify the values in the fields described above, you will notice that the slider below changes to depict the whether the limits chosen signify Tiny, Small, Medium, Large, or Huge. Conversely, you can also use this slider instead of specifying the maximum & minimum limits

- Similarity Threshold You can utilize this slider to set the similarity threshold percentage which is to be set while searching for duplicate images
- Click the blue folder icon or drag & drop a target folder that you intend to scan. The specified folder is selected & listed in target folder list as depicted in the figure below –

Figure 70 – Selecting one or more source & target folders

Tip: You can add more folders in the source and target folder list by clicking the corresponding green Add folders button as depicted in the figure above.

Tip: Files from the source folder are considered original/master files and cannot be selected in any way. This rule overrides all available automatic selections.

Reference: To perform multiple types of selections, refer to <u>Viewing Modes Available for</u> <u>the Results on the Scan Details</u> page section.

Reference: To export your scan results details as a file, refer to <u>Exporting your Scan Result</u> <u>Details as a File</u> section.

Reference: To clear the displayed scan results, refer to <u>Clearing the Displayed Scan Results</u> <u>from Scan Results page</u> section.

Tip: The source folders are treated as protected folders containing original photos. Therefore, these files listed in the original photo column are colored green and cannot be selected by you. This also indicates that these files are protected and that they cannot be deleted or moved by you.

 After you have selected the duplicate files that you intend to delete or move, from the top right-hand corner on the scan results page, click Delete as depicted in the figure below –

Figure 73 – Scan Details Page Actions Menu

Reference: Refer to <u>Scan Detail Page Actions Menu Description</u> section for a detailed description of the buttons available on the Scan Details Page Actions Menu.

The next chapter describes steps that enable you to Perform a Photo Scan.

Chapter - 8. PERFORMING A PHOTOS SCAN

The Photo application enables you to manage, edit, and share your photos. The Photo library that you build automatically while using this application is prone to having multiple duplicate photos like any other photo library. The Duplicate Photo Cleaner[™] application enables you to directly load the Photo library and it enables you to identify duplicate photos.

The steps described below enable you to perform a Photos Scan -

1. After you launch the Duplicate Photo Cleaner[™] application, the default screen is displayed as depicted in the figure below –

Figure 74 – Performing a Photo Scan – DPC default screen

 From the top right-hand corner click the Scan Mode drop-down and select the Photo Scan option. The Photo Scan page is displayed as depicted in the figure below –

Figure 75 – Selecting the Photo Scan options

3. Select the Photo library by clicking the blue folder icon

Below are the functions along with a description of the parameters that you can tweak before you start a standard scan –

- Select library Clicking on the blue folder icon or by dragging the Photo library database file (Photos Library.photolibrary file) and dropping it in the area as depicted in the figure above, enables you to select the target Photo library which is to be scanned
- Clear List Clicking this button clears the target library list
- File Types Clicking the Select button in this area as depicted in the figure above enables you to specify which file types are to be scanned for duplicates
- File Size Limits Specifying the maximum & minimum file sizes enables you to specify the size range of the files to be scanned. You can switch on the maximum & minimum limit applicability by swiping the slider button from left to right. Then you can specify the numerical values for both maximum & minimum limits and select the adjacent drop-downs to specify whether the limits must be considered in bytes (B), kilobytes (KB), megabytes (MB), or gigabytes (GB). After you specify the values in the fields described above, you will notice that the

slider below changes to depict the whether the limits chosen signify Tiny, Small, Medium, Large, or Huge. Conversely, you can also use this slider instead of specifying the maximum & minimum limits

- Similarity Threshold You can utilize this slider to set the similarity threshold percentage which is to be set while searching for duplicate images
- Click the blue folder icon or drag & drop a target library that you intend to scan. The specified library is selected & listed in target folder list as depicted in the figure below –

Reference: To perform multiple types of selections, refer to <u>Viewing Modes Available for</u> <u>the Results on the Scan Details</u> page section.

Reference: To export your scan results details as a file, refer to <u>Exporting your Scan Result</u> <u>Details as a File</u> section.

Reference: To clear the displayed scan results, refer to <u>Clearing the Displayed Scan Results</u> <u>from Scan Results page</u> section.

Tip: You can also click the Swap Images button available between the displayed original and duplicate image on screen in case you intend to keep the duplicate file while doing away with the original.

 After you have selected the duplicate files that you intend to delete or move, from the top right-hand corner on the scan results page, click Delete as depicted in the figure below –

Figure 79 – Scan Details Page Actions Menu

Tip: Note that the move & links buttons are not available in the Photo scan details action menu. This is because Photo maintains its own library file with the filename Photos Library.photolibrary. DPC automatically navigates to the default folder location of this file when you choose to select the Photo library at step 3 in this process flow. DPC cannot make changes within this library as Photo handles its library in its own way.

Reference: Refer to <u>Scan Detail Page Actions Menu Description</u> section for a detailed description of the buttons available on the Scan Details Page Actions Menu.

The next chapter describes steps that enable you to Perform a Lightroom Classic Scan.

Chapter - 9. PERFORMING A LIGHTROOM CLASSIC SCAN

Lightroom Classic enables you to edit your photos and organize your photo storage space. Moreover, this application enables you to catalog your photos & images as per your requirements. Again, like every other photo library, even a Lightroom Classic catalog is prone to having multiple duplicates files. This is where the Duplicate Photo CleanerTM application enables you to utilize your discretion identify duplicates and delete, move, or replace these duplicates with symbolic links.

The steps described below enable you to perform a Lightroom Classic Scan -

 After you launch the Duplicate Photo Cleaner[™] application, the default screen is displayed as depicted in the figure below –

Figure 80 – Performing a Lightroom Classic Scan – DPC default screen

 From the top right-hand corner click the Scan Mode drop-down and select the Lightroom Classic Scan option. The Lightroom Classic Scan page is displayed as depicted in the figure below –

Figure 81 – Selecting the Light Room Classic scan options

3. Select the Lightroom Classic catalog by clicking the blue folder icon

Below are the functions along with a description of the parameters that you can tweak before you start a standard scan –

- Select catalog Clicking on the blue folder icon or by dragging the Lightroom Classic catalog file and dropping it in the area as depicted in the figure above, enables you to select the target Lightroom Classic catalog which is to be scanned
- Clear List Clicking this button clears the target catalog list
- File Types Clicking the Select button in this area as depicted in the figure above enables you to specify which file types are to be scanned for duplicates
- File Size Limits Specifying the maximum & minimum file sizes enables you to specify the size range of the files to be scanned. You can switch on the maximum & minimum limit applicability by swiping the slider button from left to right. Then you can specify the numerical values for both maximum & minimum limits and select the adjacent drop-downs to specify whether the limits must be considered in bytes (B), kilobytes (KB), megabytes (MB), or gigabytes (GB). After you specify the values in the fields described above, you will notice that the

slider below changes to depict the whether the limits chosen signify Tiny, Small, Medium, Large, or Huge. Conversely, you can also use this slider instead of specifying the maximum & minimum limits

- Similarity Threshold You can utilize this slider to set the similarity threshold percentage which is to be set while searching for duplicate images
- 4. Click the blue folder icon or drag & drop a target library that you intend to scan. The specified library is selected & listed in target folder list as depicted in the figure below –

Tip: You can also click the Swap Images button available between the displayed original and duplicate image on screen in case you intend to keep the duplicate file while doing away with the original.

 After you have selected the duplicate files that you intend to delete or move, from the top right-hand corner on the scan results page, click Delete as depicted in the figure below –

Figure 85 – Scan Details Page Actions Menu

Tip: Note that the move & links buttons are not available in the Lightroom Classic scan details action menu. This is because Lightroom Classic maintains its own catalog file with the filename Lightroom Catalog.lrcat. DPC automatically navigates to the default folder location of this file when you choose to select the Lightroom Classic Catalog at step 3 in this process flow. DPC cannot make changes within this catalog as Lightroom Classic handles its library in its own way.

Reference: Refer to <u>Scan Detail Page Actions Menu Description</u> section for a detailed description of the buttons available on the Scan Details Page Actions Menu.

The next chapter describes steps that enable you to Perform a Fragment Search.

Chapter - 10. PERFORMING A FRAGMENT SEARCH

The Fragment scan mode is very similar to Folder Comparison scan, but this scan mode uses a single file as a source. You can use this scan mode to search a whole image or just a selected part of it.

Tip: For the whole image you can use Similarity threshold as usual, but when searching for a selected fragment you should set the similarity threshold to 100%.

The steps described below enable you to perform a Fragment Search -

1. After you launch the Duplicate Photo Cleaner[™] application, the default screen is displayed as depicted in the figure below –

Figure 86 – Performing a Fragment Search – DPC default screen

 From the top right-hand corner click the Scan Mode drop-down and select the Fragment Search option. The Fragment Search page is displayed as depicted in the figure below –

Figure 87 – Selecting the source image and target folder(s)

 Select the Source image and the Target Folders by clicking the corresponding blue folder icons

Below are the functions along with a description of the parameters that you can tweak before you start a standard scan –

- Select Source Image Clicking on the blue corresponding folder icon or by dragging a folder and dropping it in the corresponding area as depicted in the figure above, enables you to select a source image, a selected fragment of which is to be scanned against the target folder being specified in the next point.
- Select folder Clicking on the blue corresponding folder icon or by dragging a folder and dropping it in the corresponding area as depicted in the figure above, enables you to select a target folder which is to be scanned with reference to the selected source area which you can specify using your mouse as indicated in the figure in step 4 in this process flow.
- Clear List Clicking the corresponding button clears the source and target folder lists
- File Types Clicking the Select button in this area as depicted in the figure above enables you to specify which file types are to be scanned for duplicates

The next section of this user manual Frequently Asked Questions (FAQs) as an appendix.

Appendix - A.FREQUENTLY ASKEDQUESTIONS (FAQS)

Here is a list of frequently asked questions with reference to the Duplicate Photo CleanerTM application and its usage -

Q-1. Why do I need Duplicate Photo Cleaner[™]?

Duplicate Photo Cleaner[™] is the app that makes it easy to move all your files, user profiles, settings, software and even drivers from one computer to another. It's perfect for configuring a new computer with all your stuff, syncing folders, and keeping data and settings the same on two or more computers.

Q-2. How do I install Duplicate Photo Cleaner™ on a macOS PC?

Tip: Refer to Downloading the DPC Application Installer section

After you have downloaded the .dmg installer follow the steps provided below -

 Double-click on the file you've just downloaded. A small window will appear as depicted in the figure below –

Figure 92 – Installing DPC in macOS

- 2. Drag and Drop the Duplicate Photo Cleaner[™] icon in the Applications folder and close this window
- 3. Go to the Applications folder or to the Launchpad and launch Duplicate Photo Cleaner[™] from there
- 4. When you open Duplicate Photo Cleaner[™] for the first time, your Mac may ask you if you are sure you want to open Duplicate Photo Cleaner. Click Open to launch the app.

Q-3. I have folders with intentional copies of my photos that I use as backups. How can I exclude them from DPC's scans?

You'll need to add these folders to the Ignore List. To do that, go to Settings, click on the Ignore List tab, and add the folders you want to exclude from scans.

Reference: For more information, refer to <u>The Ignore List tab</u> section.

Q-4. What are the Minimum macOS X Requirements of Duplicate Photo Cleaner[™] needed to run it on my Mac ?

The minimum macOS version required to run latest version of DPC7 is macOS Big Sur (11.0).

Q-5. What is Full Disk Access and why does Duplicate Photo Cleaner[™] need it on my Mac ?

If you are running macOS Mojave (10.14) or higher, you need to enable Full Disk Access on your Mac to ensure Duplicate Photo Cleaner works correctly.

Full Disk Access is a privacy feature that Apple introduced in macOS Mojave (10.14) and it prevents downloaded apps from accessing your important data, such as Mail, photos, Safari, etc., without getting the green light from you. Duplicate Photo Cleaner has scan modes that require access to various files, including your Mac Photos library, and that's why you'll need to manually grant permission to make sure DPC can scan all your photos and images for duplicates and similar photos.

To grant DPC Full Disk Access, follow the steps provided below -

1. Open System Preferences and go to Security & Privacy as depicted in the figure below –

•••		iiii Syste	m Preferenc	ces		Q Search	
	Sign in to yo Set up iCloud,	bur Apple ID the App Store	and more.				Sign In
			-		Q		1
General	Desktop & Screen Saver	Dock & Menu Bar	Mission Control	Siri	Spotlight	Language & Region	Notifications & Focus
(O) Internet	Passwords	Users &	CC Accessibility	Screen Time	Extensions	Security	
Accounts		Groups				& Privacy	
6		寒	e ()0()				-
Software Update	Network	Bluetooth	Sound	Keyboard	Trackpad	Mouse	Displays
-	\					۲	
Printers & Scanners	Energy Saver	Date & Time	Sharing	Time Machine	Startup Disk	CDs & DVDs	

Figure 93 – macOS System Preferences

- 2. Click the Security & Privacy icon as depicted in the figure above. The Security & Privacy screen is displayed.
- Click the Privacy tab as depicted in the figure below –

Figure 94 – Privacy tab

Duplicate Photo Cleaner [™] v7.0 User Manual (For MacOS Users) v2.0	External
WM - DPCUM - 2.0	Page 95

Copyright © WebMinds, Inc. 2025. All Rights Reserved

- 4. Click on the Lock to make changes and specify your root password.
- 5. Then select Full Disk Access from the left easel.
- 6. From the right easel, click on the plus sign which signifies Add an Application.
- 7. From the left easel, click on Applications and use the Search field on the top right-hand corner of the screen for Duplicate Photo Cleaner[™] application.
- 8. After you have successfully searched for the DPC application icon, select it. SPC will be added to the right easel on the Privacy tab. You will also see a prompt from macOS to Quit the application in case it is opened as the changes being made will not be implemented till the application has been restarted. You can click Later on this popup.
- 9. Ensure that the DPC icon is selected in the right easel on the Privacy tab and click the lock to lock the changes you just made. Now DPC has been provided Full Disk Access.

Q-6. What are the trial version limitations?

The trial version of Duplicate Photo Cleaner[™] offers unlimited scanning for duplicates and similar images. You can then delete up to 10 duplicate groups with the trial version.

Q-7. I've installed Duplicate Photo Cleaner[™] on my Mac but I can't open it. What to do ?

Most likely, that's happening because your Mac settings are preventing apps from third party developers from running on your computer. Changing the settings will help. To do that, click on the Apple menu and select System Preferences. When the System Preferences window opens, go to Security & Privacy. On the General tab click on the lock to be able to make the changes and enter your password. Under "Allow apps downloaded from:" select "Mac App Store and identified developers" or "Anywhere". Now you should be able to open Duplicate Photo Cleaner.

Duplicate Photo Cleaner ™ v7.0 User Manual (For MacOS Users) v2.0ExternalWM - DPCUM - 2.0Page | 96

I thought I had purchased a license for 3 **Q-8.** computers, but it looks like I've purchased a single-PC license. Is there any way to upgrade my license for the price difference between the two?

Please log into your account from this page. To the right of your license key, you'll see two links - to renew and to upgrade. Click on the Upgrade button and follow the prompts.

I want to install Duplicate Photo CleanerTM 0-9. on another computer using my current license key. Is that possible?

If you ever need to reinstall Duplicate Photo CleanerTM or move it to a different computer, you should copy your license key and unregister the program before you do anything else. To do that click on "Help" and go to the "About" screen inside the program. Then make a note of your license key and remove the key. This will reset the license so that you can reactivate it on a new installation (this feature is limited to 3 times).

Note: if your license key has expired, please visit the Version History page on the site and download the version that was released before your key expired. An expired key will not activate any version released after the key's expiration.

Tip: For more information, refer to Activating your DPC Installation and Error! Reference source not found. chapters.

Q-10. My computer is not connected to the Internet. Is there a way to activate Duplicate Photo Cleaner[™] offline?

Follow these steps to activate Duplicate Photo CleanerTM on a computer that's not connected to the Internet:

- 1. Purchase a license key and install Duplicate Photo Cleaner[™] on your computer.
- 2. Open Duplicate Photo Cleaner[™], click on Help in the menu and go to "About".
- 3. Copy the product key from the popup that appears.
- 4. Go to <u>this</u> page and open a support ticket. Make sure you send both your product key and your license key to the Support Team.
- 5. Our Support Team will generate activation data for your copy of Duplicate Photo Cleaner[™] and email it to you.
- 6. Copy the activation data from the email, save it as a text file and put the file on a flash drive.
- 7. Connect the flash drive to your offline computer, open the text file with the activation data, select all of it and copy it. Important: don't paste it anywhere at this point!
- 8. Open Duplicate Photo Cleaner[™]. If you have valid activation data and if you've followed these steps correctly, your copy of Duplicate Photo Cleaner[™] will become activated.

Q-11. I'm updating my macOS to a higher version. Will your software continue to work?

If you are planning to update to a higher macOS version, please follow these steps before you run the update:

- 1. Open Duplicate Photo Cleaner[™] and click on "About" in the top right corner
- 2. Make a note of your registration code, then select "Remove key" and close the program
- 3. Update your operating system to your selected higher version of macOS.
- 4. Open Duplicate Photo Cleaner[™] again and click on the "Register Now" button
- 5. Close the Web page that opens (you don't need that page because you already have your license code)
- 6. Enter your license code and the e-mail address you used to register in a pop-up window that appears
- 7. Click "Activate" and continue to enjoy Duplicate Photo Cleaner[™]

Q-12. What formats does Duplicate Photo Cleaner™ support?

Duplicate Photo Cleaner supports BMP, JPG, JPEG, JFIF, PNG, TIF, TIFF, GIF, ICO, WMP, ICNS, PSD, TGA, RAW, CRW, CR2, CR3, NEF, PEF, RAF, X3F, BAY, ORF, SRF, MRW, DCR, SR2, DNG, RW2, ARW, HEIC, HEIF, 3FR, DCX, DIB, EMF, JPS, HDP, PBM, PGM, PNS, PPM, PCT, CUR, WEBP, BAY, ERF, KDC, RWL, MEF, NRW, PTX, SRW, RLE, DDS, WDP, JXR, HDP, JPE, JIF, J2K, JPC, J2C, JP2, PCX, SVG, DCM, DIC, DICOM and V2.

Q-13. How do I configure Duplicate Photo Cleaner™ to detect only exact duplicates?

All you need to do is set the image similarity threshold to 100%. To do that, open the program and click on Settings. In the new window go to the File Search tab and move the image similarity threshold slider to 100%. Click OK to save your settings.

Q-14. How can I get more information about the images?

Setting the scan results view to tree view will make the program display information like image width and height, size, and modification date in addition to image location. To change your view settings to tree view, click on the View result menu item and select as Tree.

Q-15. I want to scan for duplicate JPG images only. How can I prevent the program from detecting GIF, BMP and PNG files?

Simply go to program settings, navigate to the File Search tab, and uncheck BMP, GIF and PNG. Click OK to save your settings.

Q-16. What is the benefit of comparing photos in grayscale?

Comparing photos in grayscale will help you get more matches without lowering the image similarity threshold. When you search for duplicate and similar photos in grayscale as opposed to in full color, Duplicate Photo Cleaner[™] disregards color changes. This method allows you to find more duplicate photos and more similar images you may want to move or delete.

To compare photos in grayscale, go to Duplicate Photo Cleaner[™] settings and check "Use grayscale comparison" on the File Search tab.

Q-17. What is Fragment Search and how does it work?

Fragment Search is a scan mode introduced in Duplicate Photo CleanerTM 7. This mode lets you select a fragment on an image and search other images for that specific fragment. Here is how to use it:

- 1. Select "Fragment Search" as your scan mode
- 2. Select the folders you want to scan for similar images
- 3. Add a photo and select a fragment on it that you want to find in other images
- 4. Start the scan

Because Fragment Search is very precise, it can take several hours to complete the scan. To make your scans faster, we suggest that you set the similarity threshold to 50% and scan smaller folders.

Reference: For detailed steps, refer to **<u>Performing a Fragment Search</u>** chapter.

Q-18. What is the difference between Easy Duplicate Finder[™] and Duplicate Photo Cleaner[™]?

Both <u>Easy Duplicate Finder</u>[™] and Duplicate Photo Cleaner[™] are designed to find and delete duplicate files. The main difference between these two apps is that Easy Duplicate Finder[™] works with duplicates of all file types, whereas Duplicate Photo Cleaner[™] works with images only. In addition to that, Easy Duplicate Finder[™] can only find exact duplicates. Duplicate Photo Cleaner is different because it can detect both identical and similar images, such as resized and edited photos. It can also find photos in different formats (a .JPG file vs. a .PNG file, for example).

If you are having trouble choosing between Easy Duplicate Finder[™] and Duplicate Photo Cleaner[™], ask yourself what types of duplicates you want to find. Easy Duplicate Finder[™] is ideal if you want to delete duplicate documents, songs, photos, emails, and videos from your computer. But if all you want to do is organize your extensive image library, consider getting Duplicate Photo Cleaner[™]. It will not only help you find and delete duplicate photos, but also let you easily sort through similar shots and decide which ones to keep and which to delete or move.

Q-19. How can I select multiple images when the scan is complete?

You can select images you want to delete in bulk on the Scan Results screen. Use the "Select Photos" drop-down menu to select all duplicates, select all originals, or select only high or low-resolution images.

Q-20. How can I delete multiple files in Duplicate Photo Cleaner™?

To delete several files in one go, select the files you want to delete and then click on the trash can icon in the top right corner of the app screen.

Duplicate Photo Cleaner ™ v7.0 User Manual (For MacOS Users) v2.0ExternalWM - DPCUM - 2.0Page | 101

Copyright © WebMinds, Inc. 2025. All Rights Reserved

Q-21. I have a really large photo library. What's the best way to manage it with Duplicate Photo Cleaner™?

If you have a very large photo library, follow these steps to make deleting duplicate and similar photos as efficient as possible:

- 1. Go to Duplicate Photo Cleaner[™] settings and set the similarity threshold to 100%, then scan your whole photo library. This will allow you to find exact duplicates and delete them in a single click.
- 2. When your photo collection is free from exact duplicates, go back to the Settings panel and set the similarity threshold to 85%.
- 3. Break up your photo library into several manageable parts, scan it part by part, and resolve similar images in each part.
- 4. When done, scan your whole photo library once again to find any duplicates and similar photos you might have missed.

Q-22. Is there a way to compare images in folder A against images in folder B with Duplicate Photo Cleaner™?

Simply go to the Scan Mode drop-down menu and choose Folder Comparison. Then add a source folder to the left drag & drop area and Duplicate Photo Cleaner[™] will treat files in this folder as the originals. Then add the folders you want to compare against the source folder to the target scan area to the right and run a scan. When done, use Duplicate Photo Cleaner[™] to delete the duplicates as you normally would.

Q-23. What exactly does the Folder Comparison scan mode do?

The Folder Comparison mode is a special scan mode that makes it easy to compare images in two or more folders. It treats files in Source Folders as originals (master files), thus helping you to avoid any confusion when you're choosing which photos to delete and which to keep. This mode is great for comparing files on external drives with images on your computer and merging folders.

Q-24. How does Duplicate Photo Cleaner[™] decide which photos are the originals and which are the duplicates?

When you are using most scan modes, Duplicate Photo Cleaner[™] considers the first image in a group of duplicates the original file.

When you switch to the Folder Comparison mode, all the files in the Source Folder(s) are treated as the originals, while the photos in target folders are marked as the duplicates. In Fragment Search mode, the source image file is the original.

Q-25. What is multi-threaded image processing?

This feature has been made permanent in DPC version 7 and it makes Duplicate Photo Cleaner[™] use all available CPU cores for image processing. This feature makes the scan up to 50% faster in comparison to DPC version 5 without this feature being manually enabled.

Q-26. How does Duplicate Photo Cleaner™? Does it simply compare Meta (EXIF) data or does it compare the actual images?

Duplicate Photo Cleaner[™] uses an advanced algorithm to compare the actual images, just like a human would. Depending on the program settings, it may take EXIF data into account when determining image similarity level.

Q-27. Which versions of Adobe Lightroom are supported?

Duplicate Photo Cleaner[™] supports Adobe Lightroom 6 and newer. If you have an older version on your computer, the Lightroom Scan mode will not appear in the Scan Modes menu.

Q-28. How to use the Search / Filter results feature in DPC?

The Search / Filter results feature offers you a handy way to go through the scan results and manage your photos more effectively. You can open the Search / Filter window by clicking on the "Search" icon in the top right corner of the results window.

Figure 95: Opening the Search / Filter window

The search tool lets you search / filter files by name, by date, by size, and by duplicate group.

Search / Filter duplic	ates							×
File path and name Use symbol "*" for ar	OR or string and symbo	NOT	single character					
Similarity value	OR	NOT	between	~	20	% -	20	%
Modified	OR	NOT	between	~	30-12-1899	-	30-12-1899	
File size	OR	NOT	equal	*		0		~
EXIF information	OR	NOT	artist	*				
Search	Filter duplicate list						Cancel	

Figure 96: Search / Filter window

The file name field allows you to use wildcard characters where an asterisk (*) represents one or more characters and the question mark (?) represents a single character.

The asterisk in a wildcard matches any character that appears zero or more times. For example, "comp*" matches anything beginning with "comp" which means "comp," "complete," and "computer" are all matched.

The question mark stands for a single character mentioned only once. For example, "c?mp" could be either "camp" or "comp".

You can use this feature and wildcard characters to search DPC scan results quickly and effectively to find the images you need.

Q-29. How do I save a scan and import it later?

Reference: To Save a scan, refer to <u>Saving a Scan</u> section and to Import a saved scan, refer to <u>Importing a Scan</u> section.

Q-30. How does Duplicate Photo Cleaner[™] determine which image is the original and which is the duplicate?

DPC sees an image as the original based on a set of conditions. Here they are in order of priority:

- the file has the largest resolution in the group
- the file has the largest size in the group
- the file is the "newest" in the group (determined by modification date)

Q-31. My scan got stuck! What to do?

If your scan with Duplicate Photo Cleaner[™] got stuck or is very slow, don't panic because most likely it's not a bug. This could be happening because you've chosen a very accurate scan mode and added too many images for Duplicate Photo Cleaner[™] to compare. Just stop your current scan and try the following:

- Add smaller folders don't scan your entire image library in one go
- If you are using Fragment Search, lower the similarity threshold to 50% and never add large folders
- Eliminate true duplicates first select Standard Scan and set the similarity threshold to 100%, delete the duplicates and then start looking for similar images in smaller chunks

This will help you speed up Duplicate Photo Cleaner[™] scans and manage your photos more effectively.

Q-32. When I click "Reverse selection", both files in groups where the bulk selections didn't work become selected.

That's because the "Reverse selection" option changes the selection to the opposite state (selected -> non-selected, non-selected -> selected)

Q-33. I accidentally closed Duplicate Photo Cleaner[™]. Is there a way for me to load previous scan results?

Duplicate Photo CleanerTM doesn't save your scan progress automatically but it offers you an option to pause and resume scans. If you've paused a scan, DPC will resume it right where it left off even if you've closed the application.

Figure 97: Pausing a scan

We recommend that you use the Pause feature if you decide to abort a scan because you don't have the time to sort through the results. This will speed things up a great deal.

Q-34. My system crashed and Duplicate Photo Cleaner[™] got unregistered. How do I get my software up and running again?

First, go to <u>www.duplicatephotocleaner.com</u>, download the .dmg (MacOS) installation file depending upon your operating system and install Duplicate Photo Cleaner[™]. If you have a license key, you can log into your account with the email address used when you purchased your license key from <u>this</u> page. There you will see your current license key. You can also find your license key in the email we sent you when you purchased Duplicate Photo Cleaner[™]. Use the key to activate Duplicate Photo Cleaner[™] by running the program and entering the license key in the activation box.

Duplicate Photo Cleaner ™ v7.0 User Manual (For MacOS Users) v2.0ExternalWM - DPCUM - 2.0Page | 106

If you discover that your license key has expired, make sure you go to the "<u>Version History</u>" page and install an older version, the one for which you bought the key. Duplicate Photo Cleaner[™] will work as it should, although you won't be able to download updates. Your key should activate any version released prior to your software expiring.

If you lost your license key, please submit a <u>support ticket</u> and send us all the relevant information about your purchase.

Q-35. I have a drive that has only photos on it. After about 15 minutes of scanning, the program hangs.

Duplicate Photo Cleaner[™] supports large amounts of files and works on large drives. Please make sure your drive is not damaged and doesn't have bad sectors. Also please make sure you have the latest version of Duplicate Photo Cleaner[™] installed. You can check for new versions by opening the program, clicking on Help in the menu and clicking on Update.

Q-36. Duplicate Photo Cleaner[™] reported that some duplicate files could not be deleted. Why is that and how can I fix this?

There could be several reasons why Duplicate Photo Cleaner[™] is not deleting these files. Here are the most common fixes for this problem:

- The files you are trying to delete are being used by another application. Close all programs except Duplicate Photo Cleaner[™] and try deleting the duplicates again.
- 2. Make sure the files you're trying to delete aren't located on a read-only drive, like a CD or a DVD.

Q-37. I use Windows tags to organize my photos and I want to delete images that don't have them. Can DPC help?

Absolutely! Duplicate Photo Cleaner[™] supports Windows tags. Simply scan your image library and wait for the results to be displayed. You can hover over image thumbnails in Multiviewer to view EXIF data and Windows tags. When you are ready to select the images based on Windows tags, use the "Select files with tags" and "Select files without tags" bulk selection options.

Convright © WehMinds Inc. 2025 All Rights Reserved	
Q-38. After the search is complete, I click "Select files with the original names" and no files are selected in some duplicate groups. Why is that?

This means that DPC couldn't identify the original for these groups. When DPC cannot determine the original file in the group because all files match the same criteria (i.e., have the same file name), it will not select any files in the group. You can still use bulk selection options that use different criteria.

Q-39. I installed Duplicate Photo Cleaner[™] on Mac OS X Mojave and got a warning that DPC wanted access to control Finder. Why is that ?.

This warning is a new security feature that Apple added to Mojave. Basically, the OS asks you if you want to allow DPC to access and works with your files - a necessary permission to scan your Mac for duplicate and similar images. Simply click on "Allow" and no further action will be required.

The easiest way to stop these popups is to give DPC full disk access. Here is how:

- 1. Open System Preferences, go to Security & Privacy, click on the padlock icon, and enter your system password to be able to make changes to the settings.
- 2. Click on the Privacy tab. In the left-hand sidebar, scroll down to the Full Disk Access section (it looks like an ordinary folder)
- 3. Drag & drop Duplicate Photo Cleaner from the Applications folder to the "Allow" window or click on the "+" sign, browse to DPC, and grant it full disk access.

The next section of this user manual includes an **Index** of frequently referred terms or phrases with reference to the Duplicate Photo Cleaner[™] application and its usage.
